- **Window film transforms working environments therefore keeping staff more productive**
- **Allows maximum amount of natural light to enter the building**
- **Can provide one way privacy  
Enhances the look of your office/building**

The most common issue with glass and windows is trying to reduce the heavy amount of glare and heat that comes into an office with sunlight. There are effectively two solutions to this. Solar/Anti-Glare Window Film and Solar/Anti-Glare Window Blinds.

The first is our extensive range of advanced micro thin polyester window film. This is specifically designed for its special performance characteristics in sunlight, and has a range of colours to enhance any architectural finish; it can be reflective or see-through. This is proven to significantly reduce glare and excessive heat build up (by 80%) while at the same time allowing nearly full vision through natural light. This is our most popular and cost effective solution.
