

Anti Fade: Window Film

Reduce fading of your window products/displays

Show it off
Make it bright
Keep it safe
Priceless

FEATURES

- ***99% protection against UV rays which are responsible for up to 60% of fading**
- **Totally transparent film so complete clarity is maintained**
- **Reduce the time taken for stock rotation with window displays**

Many things suffer “fading” when exposed to sunlight – e.g. shop displays, furniture carpets and curtains, photographs, works of art, soft furnishings. We recommend this UV protection window film particularly for shops, hotels, showrooms, furniture stores, stately homes, art galleries, museums – wherever protection is needed from the sun’s harmful rays.

Our transparent film blocks UV Rays by up to 99%*. We apply it discreetly to the inner face of the glass – enabling not only complete clarity for visibility, but also maximum protection. Our UV Protection window film can be combined effectively with most of our other window film products.

* It should be noted that UV Rays are only responsible for 60% of fading; the remaining 40% is caused by internal heating, lighting and indeed the make up of the product itself.
