

Cleaning and General Care Instructions

Window film is installed by trained professionals. If you observe some changes over the first 2 weeks, they are a natural part of the bonding process.

Please note the following:

- Do not clean the film during the drying period. Approximately 2-4 weeks are needed for adhesive thoroughly bonds the film to the glass.
 - A slightly hazy or milky appearance caused by water between the film and the glass at the outset sometimes appears. Don't be concerned, it will disappear.
 - The barely visible, clear border around the edges ensures that the film is properly bonded to the glass.
 - For best cleaning results, do not clean the film for 30 days after installation. Do not use brushes, pure ammonia, industrial strength cleaners, or solutions that contain abrasive materials. Always use a soft clean cloth to wash and dry your windows. Avoid coarse paper towels. A rubber squeegee may also be used.
 - Should Safety and Security films inadvertently receive deep scratches or cuts, contact us for immediate replacement.
